

gocept.reference - Bug #4649

Add a testing hook to clean name caches

2009-02-03 14:53 - Thomas Lotze

Status:	Confirmed	Start date:	2009-02-03
Priority:	Normal (P3)	Due date:

Target version:	gocept.reference ---		
Keywords:			

Description

When a reference descriptor has found out its name, it caches the name. This means that tests of code using references may pass when run in one order but not in another, or tests may pass but the application breaks anyway. It should be possible for tests to have cached names cleared to improve test isolation.
