Description			
for Firefox: network.http.phishy-userpass-length=255, see http://freshfoo.com/blog/HTTP_Auth_and_Selenium			

History

#1 - 2009-12-15 15:55 - Thomas Lotze

Interestingly, the problem this is supposed to solve doesn't actually occur for me.

We noticed some trouble with the log-in when testing the webmailer, however what happened there isn't that FF warns about a phishy-looking URL but that it doesn't accept the credentials when trying to traverse certain objects. We could open the ZMI using the same URL syntax and selenium.

#2 - 2010-12-04 18:21 - Wolfgang Schnerring

- Status changed from New to Rejected

I haven't seen this problem happen anymore for at least a year, I guess FF >3.x doesn't react this way anymore?

And if the workaround is to set an about:config property, that needs to be done outside of gocept.selenium anyway.
